2.3 Scope of Works:

Background

The Uttarakhand Environment Protection and Pollution Control Board (UEPPCB) is carrying out ambient air quality monitoring at eight locations of six major towns of the State. During the monitoring period, it was observed that the concentration of Respirable Suspended Particulate matter (PM₁₀) in Dehradun and Haridwar locations are not meeting the prescribed standards stipulated under the Environment (Protection) Rules, 1986 as amended. Considering the serious environmental and health concerns, an effective air quality management system needs to be develop for Dehradun and Haridwar cities, which requires analysis of information and data related to source, source apportionment, dispersion of air pollutants, their emission quantities and ambient concentrations, mitigation options and other socio-economic parameters.

In order to maintain the ambient air quality of Dehradun and Haridwar Cities, the UEPPCB intends to prepare %Action Plan for Air Quality Improvement of Dehradun and Haridwar Cities+ of Uttarakhand, which includes - identification of emission sources; source apportionment, assessment extent of contribution of these sources on ambient environment; prioritizing the source that need to tackled; evaluating various options for controlling the air polluting sources with regard to feasibility and economic viability and formulation of most appropriate plan of action. Similar kind of studies have been conducted for six cities, namely - Delhi, Banglore, Pune, Mumbai, Channai and Kanpur by various institutions/agencies. These studies along with conceptual guidelines and common methodology; model standard operating procedures (SoPs) for sampling and analysis; development of emission factors; source profiling for vehicular sources; vehicular sources emission profiles etc. are available at the Central Pollution Control Board\$ web site: (http://cpcb.nic.in/Source_Apportionment_Studies.php)
